

# Production Ops Agent for AWS

Prevent. Resolve. Optimize.

## Elevator Pitch

NeuBird functions as a 24/7 Production Ops Agent, designed to augment IT, SREs, DevOps, and engineering teams with real-time analysis, pattern detection, and context-aware recommendations —helping teams prevent incidents, resolve issues in minutes, and continuously optimize production environments.

### Prevent Operational Noise

Collapse hundreds of raw alerts into a single prioritized incident—reducing noise, detecting anomalies early, and surfacing risk before impact.

### Resolve Root Cause Faster

Unify observability data, change events, & operational knowledge into a single agentic system that does RCA in minutes, not hours.

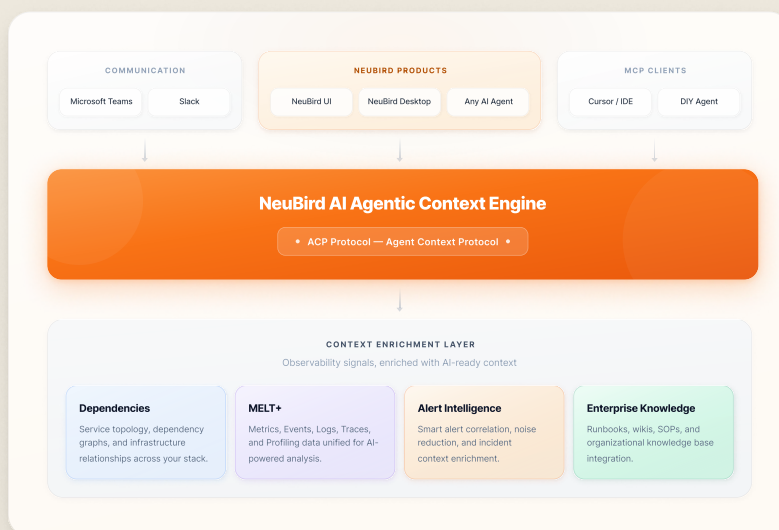

### Optimize Operations

Continuously analyze system behavior to identify inefficiencies, improve performance, and reduce cost across your environments.

## How it works

NeuBird is an Agentic AI service that runs as an AWS SaaS or within your AWS VPC. Using agentic AI and context engineering, it connects to your existing systems to analyze incidents and operational patterns by retrieving past investigative data and generating tailored investigation plans using LLM reasoning without ever sending telemetry outside your environment

- Connects logs, metrics, alerts, traces, and configuration data
- Correlates signals across services and dependencies
- Builds real-time investigative workflows
- Delivers clear, evidence-based next steps

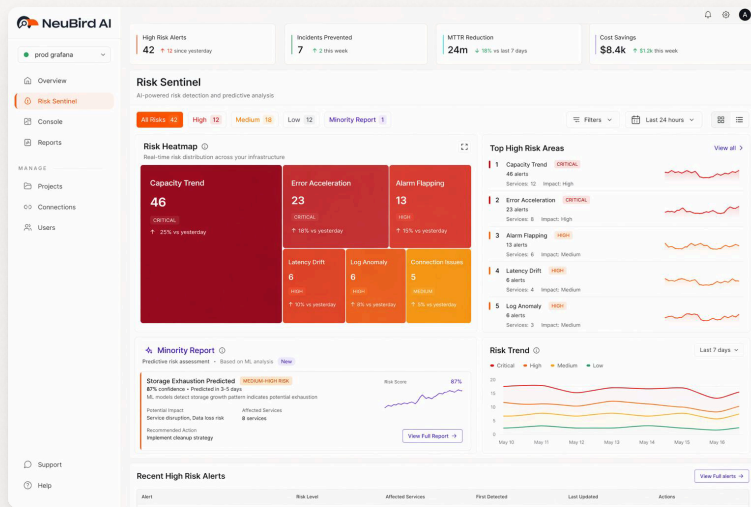

## AWS first, but not AWS only

NeuBird supports dozens of integrations and growing; including all that matter.

## The “aha” moment

No more alert storms, 3 AM bridge calls, or searching across multiple tools to find what broke. NeuBird continuously analyzes telemetry across your AWS environment—correlating logs, metrics, events, and configuration changes to show what happened, why it happened, and where to start. What took hours now takes minutes.

## Get started now

Start your free trial and be up and running in about an hour. NeuBird AI is available as SaaS with secure connections to your on-prem or cloud IT stack, or can be deployed in your VPC.

- 01 Go to the AWS [Marketplace](#) to start your trial
- 02 Create a NeuBird AI account
- 03 Connect AWS accounts
- 04 Enable telemetry queries/connections (e.g CloudWatch)
- 05 Connect collaboration tools (e.g. Slack, PagerDuty)
- 06 Integrate CI/CD sources
- 07 Configure automation permissions
- 08 Define alert routing and notification preferences

“Neubird AI changed how we operate in production. During a recent outage, it quickly identified the root cause and guided resolution in minutes, eliminating hours of manual investigation and helping our team restore service faster with confidence.”

Madhu Jahagirdar  
VP of Cloud Technology and Product
