

Production OPS Agent for Azure

Prevent. Resolve. Optimize

NeuBird AI introduces a new model: the Production Ops Agent for Azure. It continuously analyzes telemetry across Azure environments, transforming fragmented signals into a clear operational narrative that explains what is happening and why, in real time.

This enables a shift from reactive troubleshooting to intelligent production operations, where incidents are prevented, resolved in minutes, and continuously optimized.

Three Pillars of Production Operations

Prevent

Identifies the risk before impact.

- Detects alerts 30-60 min early
- Detects config drift before cascade
- Reduce alert noise by 78%

Resolve

Investigates across full stack

- Triage in minutes not hours
- RCA with runbook actions
- Human-in-the-loop approval gates

Optimize

Drives performance & cost gains

- Guides right sizing infrastructure
- Finds cost-saving opportunities
- Reduces repetitive toil

Autonomous Incident Resolution for Azure

Reduce MTTR upto 90%

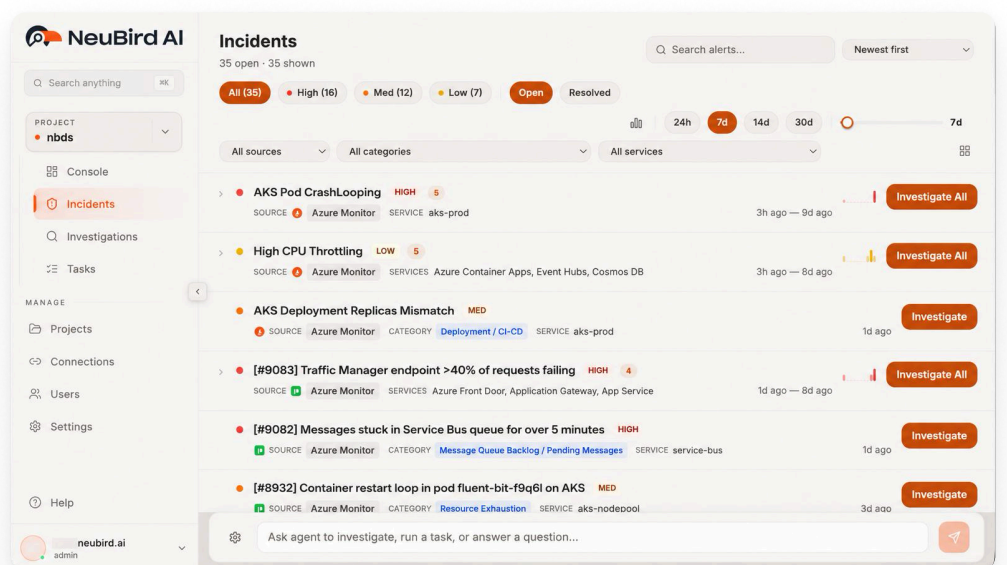

With real-time RCA and corrective recommendations - before your IT team even logs in

Reclaim Engineering Time

NeuBird is on-call 24x7. ITops efficiency and give engineers time back for design and innovation

The Most Secure AI SRE

NeuBird supports multi-cloud with secure in-VNET and SaaS deployment options

Improve ITOps Efficiency

Scale your Azure operations team and increase productivity with a platform designed to help ITOps engineers and support teams move faster. NeuBird AI enables continuous incident analysis and resolution, improving SLAs while reducing alert fatigue

Reduce firefighting time: Analyze issues instantly and deliver remediation guidance before engineers even log in.

24/7 operation coverage: Improve ITOps efficiency and SLAs by identifying and addressing multiple issues simultaneously.

Built for enterprise: Continuously monitor and analyze your environment, ensuring issues are identified and addressed at any time.

“By combining NeuBird AI’s intelligent analysis with Azure Monitor’s comprehensive telemetry, IT teams can now automatically diagnose incidents and reduce time to resolution. This integration represents exactly the kind of innovation our customers need to transform their cloud operations.

- SHIVA SIVAKUMAR
Head of Product Azure Monitor and Observability, Microsoft Azure

Enterprise Grade Security for Production Operations

NeuBird AI is built for complex enterprise environments where security, governance, and control are non-negotiable. The Production Ops Platform operates with a read-only architecture, ensuring no changes are made to production systems while still delivering real-time insight and action.

Designed for secure deployment, NeuBird supports both SaaS and in-VNET architectures, allowing organizations to keep data within their controlled environments. Telemetry is accessed where it resides, with no data replication or persistence, minimizing risk and maintaining compliance with enterprise security standards.

NeuBird is SOC 2 Type II certified, providing validated assurance around security, availability, and operational controls. The platform integrates seamlessly with Azure services such as Azure Monitor, Activity Logs, and identity systems, enforcing role-based access control, auditability, and full visibility into all platform actions.

“It’s like having a 24/7 expert on our team. With NeuBird AI, we’re acting on IT issues 10x faster reducing manual overhead, optimizing cloud costs, and refocusing engineering time on innovation.”

- CHRIS JONES
Chief Operating Officer, KAI AI
